Category:2013 films Category:Indian films Category:2010s Hindi-language films Category:Films shot in DelhiQ: Extract pdf metadata to a database using Apache Tika Can anyone please provide me an example of how to extract pdf metadata to a database using Apache Tika? I would like to extract title, author, etc. from the pdf and store them in the database. Tika is the only tool that seems to be working on this. I am looking to extract the metadata in.doc format. A: This is the only place that a good answer can be provided for Apache Tika. So before I explain how to do this using Tika I just want to mention that Tika does not work on.doc files and has been deprecated as such. It is possible to extract metadata from a.doc or.txt file using Apache Tika. It's done by simply importing the HttpResponseMessage directly. See here: The Apache Tika project provides a library that will take a binary source like.doc or.txt, and will turn it into a PDF (or any other format such as.png) as well as any other file-like object such as a page image, DOM, and plain text. See here: Using the tika-app-1.0-SNAPSHOT.jar file in your projects Maven POM, you can create a new POJO class which extends from org.apache.tika.mime.MimeType by creating a new class with the same name in your project's src/main/java folder. See here: Tika is a toolkit for reading and writing many document formats. It can be used to convert from a document to any other format. The reader extracts information from the document, and the writer can store that information in a new document, in a database, or do 2d92ce491b
