Involvement of the MCT1 melatonergic system in the anxiolytic effects of the olfactory bulbectomy in mice. Previous work has shown that the olfactory bulbectomy induces anxiolytic effects, and that the involvement of the hippocampal melatonergic system is important in this response. In this study, we have investigated whether the melatonergic system also plays a role in the anxiolytic effect induced by the bulbectomy. Mice were submitted to a battery of tests designed to evaluate anxiety-related behaviour. The results of the open field test, showing decreased anxiety-related behaviour, were supported by in vivo microdialysis experiments in freely moving mice. The anxiolytic effect of the bulbectomy was prevented by intracerebroventricular injections of the non-selective melatonergic receptor antagonist α -MMC. Intracerebroventricular treatment of mice with the selective MCT1 melatonergic receptor antagonist α -MT5-HT₂F₂T₂V showed no effect on the bulbectomy-induced decrease in anxiety-related behaviour. The results of these experiments suggest that the melatonergic system is involved in the anxiolytic effect of the bulbectomy.

Neuropeptides, neurosteroids and neuroactive steroids in the nervous system: a historical perspective and future prospects. The neuropeptide/neuroactive steroid (NPS) system is crucial for the modulation of the function of the nervous system. Neuropeptides and NPSs are crucial mediators of intercellular communication, particularly within the central nervous system. Many neuropeptides have been shown to play significant roles in the regulation of feeding, energy expenditure and mood. In this review we consider the historical perspective and potential of NPSs as a viable therapeutic target, from the first description of the hormone structure to the most recent findings in the field.

This invention relates to a new form of 3-deoxy-D-glycero-D-galacto-2-nonulosonic acid (hereinafter referred to as "KDN") or 2-keto-3-deoxy-D-glycero-D-galacto-nonulosonic acid. This glycolipid is important in the diagnosis and treatment of viral and cancerous
