In October 1997, Autodesk acquired the Industrial Design Group (IDG) of the Silicon Graphics (SGI) Corporation. IDG had its origins in the early 1970s when seven SGI engineers founded an office in Palo Alto, California to design and sell specialized CAD products. These products included Schematic Capture for mechanical CAD, which was the first commercial CAD application, and CADMAN, a CAD program based on the Schematic Capture software. IDG was a major manufacturer and marketer of CAD products and software. History Autodesk, Inc. was founded by graphic artists Paul Friedberg and Selden Mering in 1982 to provide software to design complex mechanical and electrical systems. They sought to design and market a CAD program, eventually to be known as AutoCAD, on the IBM PC platform. They hired graphic artist David B. Rusling to design the user interface and animate the icon, which would be the first of its kind, called a ribbon in CAD parlance, on a computer monitor. AutoCAD was introduced in 1982 and gained popularity quickly. In 1984, Autodesk expanded to the Macintosh platform, and AutoCAD was first shipped with a Macintosh version. In 1985, AutoCAD was released for the CP/M-80 platform. This version was very successful and became the most widely distributed CAD application of the 1980s. In 1986, Autodesk acquired the fledgling software company Scurlock Corp. and released the next version, AutoCAD 2, on the Macintosh platform. That year, AutoCAD 2 was released on the CP/M-80 platform. With the introduction of the CP/M-80 version of AutoCAD, Autodesk founded Autodesk Applications International Corp. (AIC), which provided a custom services division, and sales and marketing. In 1987, AutoCAD 3 was the first major upgrade to AutoCAD since the company was founded. AutoCAD 3 was released for the CP/M-80 platform and was the first version of AutoCAD to support multiple views. Autodesk's decision to expand its offerings to the home market was controversial at the time. In 1985, Autodesk introduced AutoCAD for the CP/M-80 platform. CP/M-80 was a rugged, low-cost operating system used primarily in business application systems, such as CAD, and was not suitable for the home market. While the CP/M-80 software was

The @OPTIONS command allows the user to run the drawing and any libraries associated with it Autodesk Resource Management System (ARMS) AutoCAD RMS integrates existing formats and software tools with the core Autodesk design and engineering software platform. It supports XML, BIM, Part Design, Structure Data Management, and Architecture. ARMS 2.0 was released in 2007 and included support for legacy applications that did not use ARMS 1.0 such as AutoCAD Mechanical and AutoCAD Electrical. ARMS 2.0 was released on April 12, 2007. Release history Since 2000, Autodesk has released numerous incremental updates for AutoCAD and other products. These updates were often accompanied by a free upgrade to the previous version, provided the software was paid for at that time. Many customers kept two separate hard drives in which they kept the paid version on one and the update on the other. When the update was installed, the original copy was wiped out and the software started up from scratch. This approach would not only let them use the update without paying for it, but also having two copies in case one got lost or corrupted. With the release of AutoCAD 2012, a common model was adopted: the release was the same as the original product, with only the minor version number changing. For instance, AutoCAD 2009 (formerly AutoCAD LT 2009) became AutoCAD 2012. The hardware driver and installation files remained the same, and the product name and model remained unchanged. The most visible differences were visual: a new "back" button was added to the ribbon, and all the menu options moved from the ribbon to the menu bar. The product also gained the .NET Framework 4.0 support, the Ability to install in the 64-bit Windows operating system and the ability to install on both 32- and 64-bit versions of Windows. In addition, the license can be a perpetual license for up to five users on one computer, and a standard non-upgrade license (which is linked to the original purchase) for others. AutoCAD and related products remain sold by AutoDesk. In 2007, the Canadian newspaper the Globe and Mail reported that 15% of the world's production of AutoCAD files was sold in the United States, although only one quarter of the world's installed base of AutoCAD was found there.
