SSL Certificate Scanner is a simple and intuitive program designed for automated scanning and analysis of SSL certificates installed on your computer. It's a standalone tool, so you can easily run it from a portable medium such as a USB flash disk. The software doesn't modify any system files, so it can easily be uninstalled from the computer after use. Main Features: * Detect, analyze, and display SSL and TLS certificates on remote hosts * Export all collected SSL certificates to files * View details of found certificates such as subject name, date of issue, expiration date, certificate chain, and more * Supports HTTPS and LDAP as well as common SLL protocols

(e.g. HTTPS, LDAP, IMAPS, and POP3) * Automatic verification of certificates' validity and certifications' reputation SSL Certificate Scanner Recommendations: SSL Certificate Scanner is a convenient tool for users who want to get a quick idea about the SSL configuration on their workstation. It's rather simple to use, and its intuitive GUI allows anyone to figure out the options in a matter of seconds. The program is free to use, and it runs without creating a single file on the hard disk. All in all, SSL Certificate Scanner is a tool you can rely on to view and export SSL certificates on your machine. SSL Certificate Scanner is available for download from PortableApps.com. I am setting up a secure connection with a new web host. The web host

has an SSL certificate, but the domain is www.accountant.com and it's an A record for the same domain name. I am running out of options trying to get this to work. I have a new IP address I can use, a new Hostname, and new Dns entries. I am still getting an error message. I have tried it with a new email address (ex: accountant@domain.com). If you can help, I would appreciate it. Thanks. Ant maravel Oct 10, 2011, 9:21 AM EDIT: This is what I got from the DNS and I don't think it is what is wrong... The Host(s) entered are not valid. The Hostname you have provided is invalid. Kindly provide the IP address that you used for the DNS set up. Please enter the valid DNS hostname and IP address. Also did you verify the SSL key via

SSL Certificate Scanner is a small program that helps you to evaluate SSL certificates remotely. Besides scanning host names or IP addresses, SSL Certificate Scanner can determine the type of SSL certificate in use and its expiration date. All these data can be directly exported to an ASCII or JSON file for future reference. Ensure safety and surveillance through multiple levels of security protection with the Clear v.3 license plate decoder, designed for everyday situations. This latest edition of our popular license plate reader, now offers a much improved set of features and comes in two distinct variants: • The clear screen version with a black border designed to hide license plate numbers and

pictures from potential intruders. •
The clear screen version with a white
border, allowing better readability.
You can also choose between a white
or black frame to keep the
background of your decoder
consistent, and set the window size to
1:1, 2:1 or 4:1 ratio, so that you can
always read whatever is on your plate
without having to zoom. Advanced
functions such as adjusting the angle
of the decoder, as well as its height
and width are also possible. The
decoder is made of a thin and light
plastic frame that is fully
customizable and can easily be
screwed to almost any surface. Why
change your license plate reader?
People have different reasons for
upgrading to Clear v.3, so take a look
at our list below and choose the one
that best suits your needs. There are

two types of people in this world: People who look at their phone while driving and people who don't. The former are also known as "addicts", and the latter are simply people who can't stand the traffic. The former have no place in the world of cabs and thus we hereby introduce the Pling app, an app that provides you with an alternative option to take a cab or book a limo at any time of the day or night and anywhere in the world. Pling is the simplest cab booking app that takes care of all the booking details such as cab booking, travel card, and toll charges while you remain seated in your room. You can also use the Pling app while you're on a business trip or a vacation to book a limo and get to the airport or hotel in style. The Pling app includes new features such

as instant booking, toll charges and a faster way to book your cab. The user interface is very simple and consists of three menus that allow you to book your taxi, limo or light vehicle. If you need to book a cab for more than one trip, you'll be delighted to know that the Pling app lets you edit your previous booking instantly. You can also find out the best available deal or offers from the Pling app. I'm guessing most of you have already heard about Facebook.
