The way Photoshop is set up in terms of layers enables artists to work in a simple, straight-forward fashion. (Image source: Shutterstock) 1. Create an image Open the program and create a new document for your digital image. If you aren't sure how to create a new document, read this step-by-step tutorial. (Image source: Adobe) Then, in the menu, click File > New to create a new image. When you choose to open your file, it will not be automatically saved into your computer. Click to enlarge. 2. Draw a logo The first step in the process of creating a logo is to choose a template that you like for inspiration. Go to your templates file and click on the template that you like the most. (Image source: Adobe) Click to enlarge. You can also create a new document or use one of the templates that are available to you to start from a blank canvas. When you create a new document, click the Crop button in the upper right-hand corner. Click to enlarge. 3. Use the Brush tool to create a logo Select the Brush tool in the toolbox and zoom in on the paper. You will see the Brush icon in the toolbar. You can choose from different brush sizes, brush modes, and other brush settings. You may find it useful to save a template from the Adobe website, in which case you can load one in the Templates section from the bottom of the main menu. Click to enlarge. To paint, click and drag a line with the brush. To erase, click with the brush on an area that you do not want the logo to be painted on. Click to enlarge. 4. Use the Pencil tool You can use the pencil tool to create a background that you like. You can take your time to paint away and create your own design. You can also click the Pencil icon to start a new layer to the canvas. By starting a new layer, you will not erase what you have done previously and you can start fresh. Click to enlarge. 5. Add text to your logo You can use the Type tool to add text to your logo. You can use the Type tool to make the text bold or italic, and you can even make it bigger

Photoshop – The best software for editing photos Image editor and graphics software The most powerful graphics editor in the world With over 200 million active users and 26 billion people using the internet today, Photoshop has established itself as the best professional image editing software. In fact, users can use Photoshop as a digital photo editor, graphic design, web design, video editing, and even a screen recorder. With over a hundred different adjustments like Curves, Soft Light, Levels, Histogram, Curves, Painterly, Spacing, Exposure, Sharpen, Vibrance, Black & White, Noise Reduction, Color Balance, Red-Eye Correction, Photo Enhancement, and more, Photoshop is the best choice for photographers who want to turn photos into works of art. Adobe Photoshop is not only the most powerful and popular photo editing software around, it is also the best choice for graphic designers, web designers, and web-developers. You may not expect a software with that kind of power to come at a low price point, but that is exactly what it is: a low price point. This is true for both Photoshop and Photoshop Elements (Elements being the basic version without many features of Photoshop). Photoshop Elements has a pricing structure that follows the “all-you-can-eat” model, meaning that you can use all the features of the program forever, for free. It's the perfect software for casual hobbyists or budding graphic designers or web developers who just want to play around with new digital art while refining their skills. You can never go wrong with free tutorials and even hardware-related free projects to practice your skills. How to download and install Adobe Photoshop Elements Photoshop is the most popular software with photo editors, but there are tons of other options in the graphic design and photo editing world. If you want to download Photoshop, you can choose from two operating systems: Windows and Mac. It is also available for PCs that run on the Linux operating system. Windows users can download the latest version of Photoshop from Adobe. You can download a free Windows version or a free Mac version, as well as a free 32-bit version and a free 64-bit version. You can also choose a free Photoshop Elements, as well as the classic version of Photoshop to get the basic features of Photoshop. This is the same version you can download a681f4349c

Merits of Using Google Drive APIs in Your Apps - mattyb ===== kamaln7 I'm not sure why those benefits are applicable to this use case. Perhaps because it's "one time use", but people don't use the Google Drive APIs like that. It's to create a Permanently Hosted Google Drive, rather than just a File on a Drive. I don't know anyone that has a SlickEdit client or similar on their machine that actually stores anything in Google Drive. It sounds like they could really use some usage statistics for this app. Topologically robust exponential curve fitting for control-related issues in EEG analysis. We show that the standard analytic model F-alpha assumes a uniform distribution of (F, alpha) curves over brain regions, while a (sparse) mixture of F-alpha distributions reveals extensive local connectivity within the brain, with cells in distinct brain regions showing distinct topologies. The issue is illustrated with simulated and real data and with data from an EEG experiment. As a consequence, fitting sparse distributions of F-alpha curves in the EEG determines an analytic solution that is globally optimal, but it may yield either poor goodness of fit in the individual cells (determined by fitting the distribution to data in a cell) or excessive variability in the estimated individual tuning curves (indicating cell identification ambiguity). Topologically robust fitting, as introduced here, deals with these problems, as it simply fit all F-alpha curves with a single topological structure. In the EEG example, the improved topologically robust fitting led to a markedly better goodness of fit in all cells and to an overall reduced variability in the estimated tuning curves. We therefore conclude that the bottom-up approach of analyzing local connectivity is beneficial for the quality of EEG data analysis. A new surgical simulation app is taking the industry by storm, and in a big way. Novalift app turns the wrist and elbow into a surgical space. For example, as a surgeon, you are able to practice a shoulder procedure by "operating" on a virtual avatar of your patient's arm. In this specific case, the patient is a brain-dead woman who is being harvested for a liver transplant. This is just one of several internal medicine cases in the app. But

Q: How to make Reactive Forms in Angular 8 to load data from service on the same Component? I am working on Angular 8 Project. I want to load the form's data from service, when I am clicking "save" and then that form will be submitted. But, after submit, if I am again click on save button and I want to load the data from service again, it should be happen without getting values from the service again. It means if I have an error in the service, first error should be shown in the form on the same component. To show that error in the same form, I am using `saveError(formControlInstance:AbstractControl): Observable`. Submitting form is working fine but data from service is not showing in that component after submit. Why it is not showing and how to achieve it?

```
saveError(formControl: AbstractControl) { const save = this.service.save(formControl.value); if (save) { save.subscribe(() => { this.service.update(); this.router.navigate(['list']); }); } } A: You can use the @Input decorator to send a value from the parent component to the child component. The value will need to be an object that has a property named src of type string that contains the id of the form control (the string representation of the id should be unique). Parent component @Component({ selector: 'parent-component', template: `` }) export class ParentComponent { //... other properties objectToBeSent = { id: formControl.value }; } Child component @Component({ selector: 'child-component', template: `Save ` }) export class ChildComponent { public form = new FormGroup({ someControl:
