Memory Hogs Created by J. 06-11-2007, 07:54 PM | Topic is locked | Name: Julie Vitaliy From: kaykay®. As I mentioned before, besides it is very useful in recovering your important partitions. You are not allowed to edit the file "LENOVO_PART.raw". I don't know how to access that. I also have a recovery partition and I have used the partition wizard in Vista, but it can see it. It just tells me there is a hidden partition. i tried seagate partition and it failed. BTW, thank you for your help. I just found it on my vista disk. You need to open the partition and go to the properties to see what the name is. -- Julie From: kaykay®. Where are you? I think you are still under the instructions, but don't worry I think I know what you want to do. Just open up partition wizard and choose to view "All partitions" and then you see all the partitions. -- Julie From: J. Julie, thank you very much for the help. i don't know how i missed you. I have problem that in Vista, when I click on the recovery partition it tells me that there is a bad sector. I can't tell you how much this bothers me and I'm sure all of you feel the same way about your data. I would like to know if there is a way to see what the bad sector is located on so that I can either copy it and start over, or if there is a way to fix it. Could you tell me how to do that? Thanks Brady From: kaykay®. Well, Windows Vista has a "recovery" option. If you put your USB in the PC before
