It seems like the phone world is finally ready to embrace a mature multi-core processor. The G1, the first Android phone to ship with the mighty dual-core TI OMAP 3430 chip, already has over 13,000 users on Android Central. The G1 is an amazing piece of hardware, but there's no way you can go straight to the Google Market and get all the goodies you expect from a phone with that sort of power. One of the key problems that single-core phones face is that they often have more memory on them than they really need. That's because of the traditional approach to phone apps -- cram

everything into one app, so one app will do everything. The G1 has plenty of power to run two apps in parallel, but only enough memory to use one. We ran through all the possibilities for making the G1 multi-core, and the results were amazing. We'll show you how to build your own tablet with an OMAP 3430, how to customize it to suit your own needs, and the best parts of this upgrade: what apps you can get, and which you can't.
