[conecteați-te pentru a consulta]Non-communicating hydrocephalus associated with extensive calcification of the atrioventricular node. A patient with hydrocephalus and ventricular dilatation had no clinical evidence of subarachnoid or ventricular cerebrospinal fluid. The diagnosis was made by myelography. The principal site of fluid accumulation was localized to the right lateral ventricle and the aqueduct of Sylvius. At autopsy, extensive calcification of the atrioventricular node was found. Hydrocephalus and ventricular dilatation are rare complications of acute inflammatory lesions of the node and perinodal tissue. Other concomitant pathologic conditions, such as myelitis and paratonsillar cellulitis, must be excluded. The search for the first computer virus, a virus so dangerous that it could cripple the National Security Agency, has become a pop-culture fixture of the early 21st century. The traditional conception is that the virus, the aptly named "Blue", was the work of a lone genius in the Soviet Union who dubbed it "Blue" to mock his own amateurishness. The reality is more complex. Rather than some brutal crime against humanity,
