Photoshop Elements is another free editing and retouching program that is a bit simpler to use. Spot Healing with Healing Brushes Photoshop has some powerful spot healing capabilities. In addition to the regular healing tools and filters (refer to the sections "Recomposing and Retouching with Layers" and "Filling in Gaps with the Healing Brush," respectively), Photoshop has a spot healing tool that you can use to blend together fragments of an image. To use the spot healing brush, follow these steps: 1. Choose Spot Healing from the Spot Healing menu by choosing it from the Brush/Pen Options submenu, as shown on the left in Figure 16-11. 2. Click inside the image to define the area where you want the healing brush to work. 3. Pick a healing brush size that fits your current editing window. For optimal results, the healing brush's size should be large enough to include the area you want to treat. 4. Click and drag to paint the spot heal over the area. 5. If you don't like the spot healing tool, click the Remove button in the bottom-right corner of the main spot healing window to remove the spot healing paint from the image. \*\*Figure 16-11:\*\* Use the spot healing tool to heal small spots in your images. Light Spots with the Healing Brush Photoshop has an equally powerful tool for removing blemishes and eliminating faint or unsightly features in your images: the healing brush. This tool works much like the spot healing brush, but it also works well with light spots. For best results, use a soft, small size brush with its opacity set to about 50 percent. The size of the area you treat determines how much the brush strokes react to your selections. Lighter areas are more influenced by your selections than darker ones. For example, a light-colored spot (like a freckle or a sunburn) is more sensitive to selections than a dark spot that might be just part of an eyelid. To use the healing brush, follow these steps: 1. Choose Healing from the Spot Healing menu. 2. Click inside the image to define the area you want to treat with the healing brush. 3. Pick a brush size that fits your current editing window. 4. Click and drag over the area you want to touch up.

or freezing disorder. His symptoms appeared for about two years, and he was hospitalized at the VA Medical Center in Long Beach, Calif., after he had a seizure. I met the patient the next day and was astonished that he had been hospitalized for 2 months and had a complete work-up, including brain SPECT. His MRI, CAT scan and EEG were all normal. One explanation for the continuous severe state that he was experiencing was that there was a Lyme disease component to his illness. It took another three weeks of testing before I could finally discover the correct answer and he was finally diagnosed with Lyme disease. At the time of his hospitalization, his IgG Lyme antibody was positive, so he had Lyme neuroborreliosis, severe. I told his primary care provider to watch him carefully and to consider adding Doxycycline to his treatment plan. He started Doxycycline, his symptomatology improved dramatically and he was symptom-free within two weeks. Then another test was ordered for antibody testing with high IgM titers in his second week of hospitalization. At that point, we looked back over the previous six months and in all his tests, he was negative for Lyme disease. Later, a second confirmation of his negative Lyme titer resulted in the diagnosis of "post-Lyme disease confusion and cognitive impairment." Nonspecific tests for Lyme are not specific for Lyme; they are frequently negative late in the disease process. I have seen patients with Lyme disease who were tested four to five years after the onset of symptoms, and the tests were all negative. It's very difficult to treat these patients and their families and to explain that such subtle imbalances in the brain have led to a state of confusion. . § 41-1643(2), makes explicit the requirement that there be proof that the public agency had actual notice of the defect in the road. Finally, this case is distinguishable from *Town of Chula Vista v. Blean*, 166 Ariz. 480, 803 P.2d 875 (App. 1990). In that case, this court held that the denial of an extension of time to request a public hearing was neither a decision nor a determination of a substantial defect. *Id.* at 482, 803 P.2d at 877. The court in *Blean* quoted section 12-902(A), as follows: It shall be unlawful for any public agency or any officer or employee thereof knowingly to do any of the following: 1. Exceed, limit, abridge, or deny any procedural or substantive right granted by this chapter. In this case, DOT denied a procedural right to a public hearing under section 12-902(A)(1) by denying Harris's request for an extension of time, when this procedural right is granted by chapter 10. The right to a public hearing in this case was not a mere right in the broad sense of the term, but was instead a right granted by chapter 10. Section 12-902(A)(1) provided that when DOT has "actual knowledge of the defect in the road" it "shall cause to be erected and maintained in the public view an appropriate sign designating the defect." (Emphasis added.) Section 12-902(A)(1) granted this right only if DOT had "actual knowledge" of the defect. As Harris points out in her appellee's brief, the "l" in "actual knowledge" can be read to include "it." Thus, DOT had actual knowledge only when it was informed in writing of the defect. I would therefore reverse the superior court and remand with directions to enter a judgment in favor of Harris and against DOT. NOTES [1] The extension application was filed as a "Request For Authorization To Continue Construction By A Deadline Date Of January 8, 1990." The rest of the record suggests that this was a mistake. The record indicates that the term "construction" was used to describe the construction of the guardrail in this case. [2] Such a provision is also contained in § 41-1643(3). [3] These two provisions are also contained in § 41-1643
